

How can we shape  
personal mobility  
for the megacity?

## WS 3: Key Messages

Can the automobile survive  
in the megacity?

Moderator: Frank Ruff, Daimler AG

# Can the automobile survive in the megacity?

## Key points in discussion

- Megacity? Be aware of the **diversity of cities** and implications for mobility.
- Suggestion: Create a **2025 and a 2050 vision for mobility in cities**, related challenges and solutions.
  - **2025: continuous improvement**, evolutionary approach, building on what we have
  - **2050: transforming things dramatically**, time to change infrastructure, behaviour and culture
- Different perspectives on the **“survival” of automobiles in megacities**.
- Auto industry: **let us make our cars “hackable”** within safe environments (by students/engineers, by everyone)
- Develop and test **driverless, slow moving vehicles in pilots**.
- Government: **Policies** - rights of way, **Infrastructure** - dedicated experiment lane for driverless vehicles **Liability** - where does the liability trail move to?
- (Semi-) automatic driving might gain special importance in **aging societies**
